drugs in hair may be detectable for approximately 90 days, whereas drugs in urine are generally detectable for one to seven days or longer in chronic users.

a powerful lobbyist can get laws changed even if there's no public consensus to do so, and yet those laws still apply to everyone

you should see what they call the monsoon; it's like every great kick returner we used to watch, except it kind of looks like a kangaroo.

because I wasn't checking up on swears.

gsk reported sales of over 45 billion in 2010
